

CNC Machinist

Description of Duties: CNC Machinist performs standard or repetitive sequences of operations where programs are proven out and setups are made by others. Able to work from instructions defining in detail tooling applications and coding, fixture and machine arrangements and console settings. Must mount and secure tooling in rack, magazine or turret; align and secure fixtures, platens and work piece and check to establish reference points. Other duties as assigned by supervisor or management.

Position Requirements: Forklift license or the ability to immediately obtain license. Able to work from instructions defining in detail tooling, applications and coding, fixture and machine arrangement and console settings. Able to check work position at specified reference points. Adjust machine and fixture stops to maintain finish and tolerance requirements. May assist with setups or approving of programs. Requires a general knowledge of tooling applications and shop practices plus advanced training on numerically controlled machine tools or CNC machining equipment. Able to use precision measuring equipment to check machine positioning and inspect work.
